# REALONLINE
TRAVELNET ONLINE BOOKING CLIENT

RealOnline is a proudly South African product that provides the travel industry with a comprehensive online booking solution enabling multiple-channel distribution and management of products in real time via direct APIs.

PRODUCT DESCRIPTION

The RealOnline product suite will meet all your travel system's needs. Combined with more than 14 years industry knowledge, powerful api's and unique back-office and front-end features, RealOnline is an industry leading booking engine which will support your travel business.

With APIs into various leading GDSs, and vendor direct APIs, you have access to the widest range of online product to fulfil your clients travel bookings.

RealOnline can manage in real time the availability of stock, change prices instantly, sell complementary products, manage offers, insert content that you wish to add to each separate Sales Distribution Channel, as well as dynamically package the products you offer. In addition you can offer the products to Third-Party Sales Channels, where the inventory is accessed via a XML Interface.

RTTC offers RealOnline on a fully hosted model that lowers your requirements of any capital outlay. Together with other hosted solutions such as travel accounting systems and document management systems, you can have a hassle free travel outfit in a few easy steps.

MULTIPLE APIs

RealOnline gives access to GDS as well as multiple other APIs giving customers the widest selection of inventory including car-hire, hotels, B&Bs and low cost carriers.

Bedbanks such as GoGlobal, Miki and also Travelport's Rooms and More, give you have instant access to a wide selection of quality hotels and B&Bs.

RTTC keeps up-to-date with its APIs and has recently upgraded to the Galileo UAPI offering agents the best inventory and functionality available via Travelport's newest API. RealMobi supports world-leading GDSs such as Worldspan, Galileo and Amadeus.
